Fund Performance

Fund Manager Comments

The Saudi financial market exhibited a mixed performance during the first quarter of 2026, supported by positive expectations for the banking, petrochemical, and energy sectors, along with a relative improvement in liquidity, as the average daily trading value reached approximately SAR 5.0 billion, compared to SAR 4.5 billion in Q4 2025. On the other hand, markets broadly faced selling pressure due to geopolitical tensions in the region and the resulting disruption in global energy markets. Nevertheless, the Tadawul All Share Index (TASI) ended the quarter with a 7.2% increase compared to the previous quarter, primarily supported by the performance of Aramco's stock and energy-related industrials, following strong investor demand driven by the rise in oil and petroleum derivative prices in global markets. Looking ahead, market performance is expected to lean toward cautious optimism, supported by the strength of the domestic economy, as investors await quarterly financial results and monitor any signs of regional conditions impacting corporate financial performance, while also tracking the trajectory of global interest rates amid rising energy prices and the inevitable cost inflation that may result.

Meanwhile, the momentum of new listings is expected to resume, further enhancing market depth and attracting additional domestic and foreign investment liquidity, particularly following the successful listing of Saleh Al-Rashed Company, whose stock surged by over 52%, confirming a higher degree of selectivity among investors in IPO stocks.

Statement of the formulas used to calculate performance and risk metrics:

Fund Statistics	
Sharpe Ratio	Standard Deviation
Formula: $\text{Sharpe} = (R_p - R_f) / \sigma_p$	Formula: $\sigma = \sqrt{(\sum (R_i - \bar{R})^2) / (N - 1)}$
R_p → Portfolio return	σ → Standard deviation
R_f → Risk-free rate	R_i → Return in each period
σ_p → Standard deviation of portfolio returns	\bar{R} → Average return
	N → Number of periods
Tracking Error	Beta
Formula: $\text{TE} = \sqrt{(\sum (R_p - R_m)^2) / (N - 1)}$	Formula: $\beta = \text{Cov}(R_p, R_m) / \text{Var}(R_m)$
TE → Tracking Error	β → Sensitivity of the fund to market movements
R_p → Portfolio return	R_p → Portfolio return
R_m → Market return	R_m → Market return
N → Number of periods	Cov → Covariance between Portfolio and market returns
	Var → Variance of market returns
Alpha	Information Ratio
Formula: $\text{Alpha} = \Delta R_p - \Delta R_m$	Formula: $\text{IR} = (R_p - R_m) / \text{TE}$
Alpha → Excess performance of the fund over the benchmark	IR → Information Ratio
ΔR_p → Change in Portfolio return	R_p → Portfolio return
ΔR_m → Change in market return	R_m → Market return
	TE → Tracking Error
