Fund Performance

Fund Manager Comment

The Saudi financial market declined during the third quarter of this year, primarily affected by continued pressure on shares in the petrochemicals and energy sectors as well as other sectors, in addition to geopolitical tensions in the region. As a result, the main market index TASI ended the third quarter with a decline of 3.3%, closing at approximately 10,441 points, losing around 359 points compared to the end of the second quarter. Oil prices also experienced clear fluctuations during the quarter, remaining at relatively elevated levels for most of the third quarter (especially in September), driven by geopolitical risks and supply disruptions, before retreating in some periods. Nevertheless, Brent crude continues to trade at elevated levels compared to the beginning of the year. By the end of the third quarter, the TASI index had erased most of its gains since the start of the year, turning its performance into a slight decline of around 0.5% compared to the end of 2025 close (at approximately 10,491 points).
